

NEOCLEAN-PZ

The NEOCLEAN-PZ is a cassette style fiber optic cleaning system design specifically for the PRIZM® LightTurn® connector. This refillable cassette cleaner uses a micro-fiber fabric to remove harmful contaminants off of the ferrule end face. The anti-static cleaning material used in the cassette produces a pristine optical window and minimizes contaminant attraction. The cleaning material is pre-washed making it excellent for use in any production environment, including clean rooms. The NEOCLEAN-PZ cassette cleaning tool will accommodate both bare ribbon and jacketed PRIZM® LightTurn® cable assemblies.
